

DEBASHISH TALUKDER

Cloud Engineer | DevOps Engineer | Platform Engineer

Email: tdebashish47@gmail.com, Cell: 907-371-4647, LinkedIn: www.linkedin.com/in/tdeb47ashish

PROFESSIONAL SUMMARY

Cloud DevOps Engineer with **10+ years of IT experience** designing, implementing, and maintaining resilient cloud infrastructure across **AWS and Azure environments**. Proficient in services including **IAM, EC2, VPC, S3, RDS, Lambda, Azure AD, Microsoft Entra ID, and Blob Storage**, ensuring secure, scalable, and highly available cloud solutions.

Experienced in **Infrastructure as Code (Terraform, CloudFormation, Ansible)** and building robust **CI/CD pipelines using Jenkins, GitLab, AWS CodePipeline, Docker, and Kubernetes** to support efficient microservices deployments. Skilled in **automation and scripting with Python, Shell, and PowerShell**, and implementing monitoring and observability solutions using **CloudWatch, Datadog** and **ELK** for proactive incident management.

Leveraged **Generative AI tools such as GitHub Copilot, Microsoft Copilot, and ChatGPT** to accelerate debugging, improve infrastructure automation, and enhance engineering productivity. Strong background in **Linux system administration, AWS DMS-based database migrations**, and implementing governance and compliance controls using **AWS Config and AWS Audit Manager** within **Agile and DevOps environments**. Experienced in **GitOps workflows using ArgoCD**, metrics-driven observability with **Prometheus and Grafana**, and building internal developer platforms leveraging **AWS Landing Zone, Control Tower, and AWS Organizations** for multi-account governance.

CORE SKILLS

Cloud Platforms & Services: AWS (IAM, EC2, VPC, S3, RDS, Lambda, CloudFormation, EKS, Fargate, Route 53, ELB/ALB, KMS, Secrets Manager, DMS, Glue, Athena, CloudTrail, Config, Audit Manager, SQS/SNS, Landing Zone, Control Tower, AWS Organizations, SCPs), Azure (Azure AD, Entra ID, VMs, VNet, Blob Storage, Azure Monitor, App Services, Azure DevOps).

Containers & Kubernetes: Docker, Kubernetes, AWS EKS, EKS Blueprints, Fargate, OpenShift, Helm, Kapitan, ArgoCD, GitOps, Karpenter, Cluster Upgrades, Service Mesh (Istio), Ingress/ALB Controller.

Infrastructure as Code & Automation: Terraform, CloudFormation, ARM Templates, Ansible, Chef, Puppet, Bash, Shell, PowerShell, Python, YAML, AWS CLI.

CI/CD & DevOps Tooling: GitLab CI/CD, Jenkins, GitHub Actions, AWS CodePipeline, ArgoCD, GitOps, SonarQube, JFrog Artifactory, Version Control (Git, GitHub, GitLab, Bitbucket), Automated Testing.

Monitoring, Logging & SRE: CloudWatch, Datadog, Prometheus, Grafana, ELK/Elastic Stack, Splunk, LogicMonitor, PagerDuty, SLI/SLO implementation, Error budgets, Incident response.

Networking & Security: VPC, Subnets, Route Tables, VPN, NAT, Security Groups, Network Policies, VPC Peering, PrivateLink, Site-to-Site VPN, SSE-KMS, IAM Roles/Policies, SAML Federation, IRSA, OPA/Gatekeeper, HashiCorp Vault, TCP/IP, NFS, DNS, DHCP, WAN, SMTP, LAN, Cisco Routers/Switches, FTP/TFTP, Tenable, CyberArk PAS, AWS Secrets Manager.

Virtualization & OS: VMware ESXi, Hyper-V, PowerVM, Linux (RHEL, CentOS, Ubuntu, SUSE), Windows Server.

Collaboration & Project Tools: Jira, Confluence, ServiceNow, Agile/Scrum, Teams, Slack, Box.

Databases: SQL, MySQL, PostgreSQL, DynamoDB, Amazon RDS, Oracle, Greenplum, GemFire.

Application Servers: Web Logic Application Server 9.x, 10.x, Apache Tomcat 5.x/7.x, Red Hat, JBOSS, WebSphere.

Web Servers: Tomcat, APACHE 2.x, 3.x, JBoss 5.x & Web Sphere 4.0/5.0.

PROFESSIONAL EXPERIENCE

Tata Consultancy Services — *Senior Cloud Engineer*

Aug 2024 – Present | Edison, NJ

Client: USAA, San Antonio, TX

- Designed and developed multi-tenant AWS Cloud IaaS solutions using serverless architecture, event-driven systems, messaging, and distributed caching patterns with technologies like Spring, OpenShift, Kafka, and BMC Control-M.
- Managed and optimized various AWS services including IAM, EKS (Fargate), Lambda, CloudWatch, SQS, S3, RDS, Secrets Manager, VPC, and EC2, leveraging Terraform for infrastructure as code.
- Supported platform engineering efforts by developing standardized infrastructure, automation workflows, and CI/CD pipelines that improved developer productivity and operational reliability.
- Provisioned and managed EKS clusters using Kapitan, enabling reusable and maintainable infrastructure templates for scalable deployments.
- Designed and implemented GitLab CI/CD pipelines for 60+ microservices, reducing deployment failures by **40%** and improving release frequency.
- Utilized JFrog Artifactory for storing, versioning, and distributing build artifacts efficiently across environments.
- Implemented centralized observability using Datadog, Prometheus, Grafana, and ELK, cutting mean-time-to-detect (MTTD) by **55%** and reducing production incident duration by **35%**.
- Automated infrastructure and operational tasks using Python, Bash, and Shell scripting; adopted GitOps practices with ArgoCD for declarative, git-driven deployments across EKS clusters.

- Worked extensively with Docker and Kubernetes to containerize applications and orchestrate their deployment.
- Administered EKS clusters, including creating and deleting namespaces, upgrading cluster versions, and configuring Application Load Balancers (ALBs) for traffic management.
- Was involved in the migration of legacy EKS Blueprint v1 clusters to EKS Blueprint v2, ensuring a seamless transition with minimal downtime and enhanced reliability.
- Worked in cluster lifecycle management across multiple environments, executing zero-downtime upgrades and improving platform availability from **99.5% to 99.95%**.
- Modernized and remediated **100+ Terraform projects**, aligning them with updated compliance and pipeline standards, eliminating critical security risks and generating **\$400K in annual cost savings**.
- Documented infrastructure designs, operational processes, and best practices using Confluence, ensuring transparency and knowledge sharing across teams.
- Used ServiceNow for managing change control and maintaining compliance with enterprise governance.
- Deployed and configured EKS clusters using AWS EKS Blueprints for consistent and production-ready cluster setups.
- Followed Agile methodologies and used Jira for sprint planning, issue tracking, and team collaboration.
- Exposure to application development using Python Flask framework.
- Utilized ServiceNow to streamline ITSM processes, track incidents and changes, and support audit-ready documentation aligned with ITIL standards.
- Utilized GitHub Copilot to accelerate troubleshooting, improve debugging accuracy, and enhance development productivity across cloud and infrastructure workflows at USAA.
- Implemented DevSecOps practices using SonarQube in GitLab CI/CD on AWS, reducing technical debt and preventing insecure code from reaching production.
- Utilized AWS Security Hub to continuously monitor security controls, automate compliance checks, and support audit-ready reporting aligned with organizational security standards.
- Implemented cloud cost observability practices using AWS Cost Explorer and AWS Trusted Advisor to analyze usage patterns, identify cost optimization opportunities, and support FinOps-driven cloud governance.

Environment: AWS EC2, VPC, S3, Security Groups, IAM, Lambda, AWS EKS, EKS Fargate, EKS Blueprint, CloudWatch, Prometheus, Grafana, AWS Secrets Manager, AWS Cost Explorer, Terraform, RDS, JIRA, Confluence, Slack, CyberArk, Microsoft Teams, GitLab CI/CD, ArgoCD, Python, Linux, JFrog, ServiceNow, GitHub Copilot.

Staxa Technologies LLC — *Cloud DevOps Engineer*

May 2019 – Mar 2024 | Piscataway, NJ

Client: Penske Truck Leasing (Jan 2020 – Mar 2024), Reading, PA

- Worked extensively with AWS services including VPCs, Subnets, Route Tables, Security Groups, Internet Gateways, NAT Gateways, ELB/ALB, S3, EBS, AMIs, Lambda, Glue, Athena, SQS, SNS, RDS, CloudWatch, and CloudTrail to support large-scale cloud infrastructure.
- Architected multi-account AWS VPC environments with secure VPN and VPC peering, supporting **300+ cloud workloads** while improving network reliability and reducing security incidents by **30%**.
- Implemented S3 cross-account replication using replication rules and Lambda, while applying SSE-KMS encryption for secure data storage.

- Administered and maintained Linux-based cloud environments—performing provisioning, backups, patching, system upgrades (including Gold AMI), and routine platform testing.
- Monitored system health and performance using CloudWatch, LogicMonitor, and Tenable, troubleshooting CPU, memory, disk I/O, and network utilization issues.
- Strengthened cloud security by managing IAM users, roles, and policies; performing API key rotations; configuring SAML 2.0 federation with Active Directory; and applying IAM best practices.
- Implemented AWS Fargate with EKS for serverless container management, enabling secure cluster operations using IRSA, secrets management, and Kubernetes network policies.
- Built and maintained Azure cloud services, including Azure AD, Entra ID, VMs, VNet, Blob Storage, Azure Monitor, App Services, and Azure DevOps Pipelines.
- Automated cloud operations and configuration management tasks using Shell, Python, and Ansible, along with IaC tools such as CloudFormation and Terraform.
- Provisioned and supported RHEL servers using CloudFormation and Terraform, enhancing infrastructure consistency and compliance.
- Designed RESTful API architectures using AWS API Gateway and integrated PrivateLink for secure private connectivity to Snowflake without public internet exposure.
- Contributed to MLOps platform capabilities by provisioning and maintaining AWS SageMaker Notebook Instances, enabling scalable model development and experimentation using data stored in S3 data lakes with Glue and Athena ETL pipelines.
- Managed multiple database engines including MySQL, PostgreSQL, Oracle, Greenplum, Gemfire, and Amazon RDS, ensuring secure connectivity and reliable performance.
- Utilized CyberArk PAS for privileged access management and ensured compliance with organizational security standards.
- Designed and supported AWS-based data solutions, including data modeling, ETL development using AWS Glue, data warehousing, scalable data pipelines, and S3-backed data lake architectures leveraging Athena for analytics.
- Used Jira for project tracking, Confluence for documentation, and Teams/Outlook for cross-team collaboration, including coordination with offshore teams for patching and vulnerability remediation.
- Supported cloud disaster recovery planning, security hardening efforts, and routine compliance activities across AWS and Azure environments.
- Investigated and resolved complex networking issues using a variety of diagnostic tools, ensuring stable and secure connectivity across cloud workloads.

Environment: AWS EC2, VPC, S3, Security Groups, IAM, SageMaker, Lambda, AWS Glue, CloudFormation, CloudWatch, Prometheus, Grafana, Terraform, CloudTrail, RDS, PCF, LogicMonitor, JIRA, Confluence, CyberArk, Microsoft Teams, Ansible, Python, Bitbucket, RHEL 7 & RHEL 8, Windows.

Client: Apple (Jul 2019 – Dec 2019), Sunnyvale, CA

- Managed core AWS services including IAM, EC2, S3, VPC, RDS, Route 53, and Lambda, while troubleshooting IAM permissions and configuring AWS EventBridge for event-driven alerts.
- Created and managed KMS keys for encrypting S3 and EBS data, and automated infrastructure provisioning using Terraform, Ansible, and AWS CLI.
- Built CI/CD pipelines using Jenkins and AWS CodePipeline, containerized microservices with Docker, and deployed workloads on Kubernetes clusters.
- Utilized Git for version control and automated operational tasks using Python, Ruby, and Bash scripting.
- Configured monitoring and alerting with CloudWatch, Splunk, and PagerDuty, enabling proactive performance tuning and rapid incident response.

- Installed, configured, and administered Red Hat Linux and CentOS servers, monitored system performance, and provided on-call production support.
- Performed security audits, implemented AWS/Linux security best practices, and maintained compliance across cloud environments.
- Collaborated with offshore teams for issue resolution, used Pivotal Tracker for Agile project management, and leveraged Slack and Box for team communication and documentation.

Environment: AWS, Ansible, Docker, Kubernetes, Jenkins, ArgoCD, SonarQube, AWS CodePipeline, Terraform, AWS Glue, SageMaker, CloudFormation, Azure, Apache Tomcat, Box, Pivotal Tracker, PagerDuty, Prometheus, Grafana, Slack, Git, GitHub, Python, Shell scripting, Linux.

Brac IT Services Ltd. (biTS) — *UNIX Administrator*

Mar 2012 –Jun 2015 | Dhaka, Bangladesh

- Deployed VMware ESX/ESXi (4.x/5.x) on HP hardware and provisioned virtual machines running Red Hat Enterprise Linux, Ubuntu, CentOS, SUSE, Debian, and Windows Server 2003/2008, including EMC-integrated virtual environments.
- Performed Linux administration tasks such as server restarts, application installations, monitoring setup, template creation, VM cloning, and migrating systems across ESX hosts using VMware Virtual Client 3.5.
- Conducted kernel tuning and developed Shell and PowerShell scripts to automate system maintenance and file management.
- Administered HP-UX, Compaq, Sun Solaris, and Linux servers, configuring NFS, NIS, DNS, DHCP, SNMP, NTP, FTP, and Proxy services across production and lab environments.
- Implemented and maintained network environments leveraging TCP/IP, NFS, NIS, and related protocols, ensuring seamless connectivity for UNIX/Linux servers.
- Provided support for Apache Tomcat and Java-based applications running on Linux servers, serving multiple internal and external clients.
- Managed storage provisioning, volume management, and file systems using LVM and Veritas within SAN environments.
- Designed and tested disaster recovery strategies for VMware ESXi–hosted Windows systems to ensure business continuity and data integrity.

Environment: Linux (Red Hat, CentOS, Ubuntu, SUSE), Apache Tomcat, Nagios, Java, Windows 2003/2008, DNS, DHCP, TCP/IP, FTP, NTP, SNMP, SMTP, NFS. Windows. Shell Scripting.

CERTIFICATIONS

AWS Certified Solutions Architect – Associate (In Progress) | AWS Certified DevOps Engineer – Professional (In Progress) | Certified Kubernetes Administrator (CKA) (In Progress)

AWS Training & Course Completions (AWS Training and Certification): AWS Technical Essentials | AWS Well-Architected Foundations | Introduction to Building with AWS Databases

EDUCATION

Master of Science (2015–2018) — University of Alaska Fairbanks (Graduated 2019)

Bachelor of Science (2007–2012) — Shahjalal University of Science & Technology (Graduated 2013)
